

USSN 10/076,165 – Page 6

VERSION WITH MARKINGS TO SHOW CHANGES MADE

IN THE CLAIMS:

1. (Amended) An improved piezoelectric (PZT) force motor, comprising:
a housing having opposing ends;
a PZT element concentrically supported [relative] about a portion of the housing, said PZT element being operative to expand and contract the ends of the housing through the application of an electric signal; and
a plurality of components in series within the housing exhibiting both positive and negative coefficients of thermal expansion which cooperate to cancel one another so as to reduce the overall temperature expansion coefficient of the motor.
4. (Amended) The improved piezoelectric force motor of claim [1] 3, wherein the second member is a cup.
